---

## Objective

Computer Science undergraduate with experience in web and mobile development, AI, and database management. Seeking to leverage my skills in software development and AI to contribute effectively to a dynamic team.

---

## Education

**FAST National University of Computer and Emerging Sciences**, Karachi, Pakistan

Bachelor of Science in Computer Science

CGPA: 3.04

**2021–Present**

---

## Skills

**Programming Languages:** Python, JavaScript, C, C++, C#, HTML, CSS

**Frameworks and Libraries:** NumPy, Pandas, React.js, React Native, Node.js, ASP.NET

**Database:** MySQL, MongoDB, Firebase

**Tools:** Git/GitHub, Microsoft Office, Visual Studio Code, Jira, Oracle, Cisco Packet Tracer

---

## Experience

**React Native Intern**

**Feb 2025–Mar 2025**

**Codepool Solutions**, Karachi, Pakistan

Developed a freelance marketplace mobile application during my internship at Codepool Solutions, a software development firm specializing in mobile and web applications. Designed and implemented features such as user authentication, profile management, service listings, and real-time messaging using React Native and Firebase.

**Technologies:** React Native, Firebase, JavaScript

---

## Projects

**VolunteerBazaar - FYP**

**Sept 2024–Present**

Developing a mobile platform to connect volunteers with organizations using AI-driven matching. The platform features separate portals for volunteers and organizations, with a chatbot integrated with RAG and recommendation algorithms to suggest relevant opportunities based on user preferences.

**Technologies:** React Native, Node.js, MySQL, AI (RAG algorithm), Recommendation System

**Agrade App**

**Sept 2024–Dec 2024**

A mobile application that connects tutors with students and includes real-time messaging. Developed as part of a university course on mobile development, the app enables users to schedule and communicate efficiently.

**Technologies:** React Native, Firebase, JavaScript

**2-Factor Authentication System**

**Sept 2023–Dec 2024**

Developed as part of an Information Security course, implementing a two-factor authentication (2FA) system that enhances security by requiring both a password and a code sent to email or phone.

**Technologies:** Node.js, React.js, MongoDB, 2FA

---

## Coursework

- Data Science, Artificial Intelligence, Generative AI, Deep Learning Perception, Programming for Mobile Devices
